

Task:

1. Place your page onto your drawing board, tape lightly at each corner. Line up a border with your set square firmly against the edge of your drawing board.
2. With a T-square and the 30/60 set square, complete the 120mm Isometric cube with the correct set square and the T-square. The guide is there to get you started.
3. **It is important you work lightly in HB pencil as you need to rub lines out!**
4. Begin to cut out sections of the isometric cube - use the set square correctly (see sample below). The more 'cuts' the better.
5. Using a range of greyleads, render light and shade to give the cube form.
6. Complete the title box in **capital letters**.
7. **All lines to be ruled, equipment to be used correctly at all times.**

CUT OUT ISOMETRIC CUBE
