

# To transfer a file from Publisher to Photoshop Elements.

1. In Publisher, select the whole image you have produced by either using **Ctrl A** or using the arrow tool and drawing a square around the whole lot.

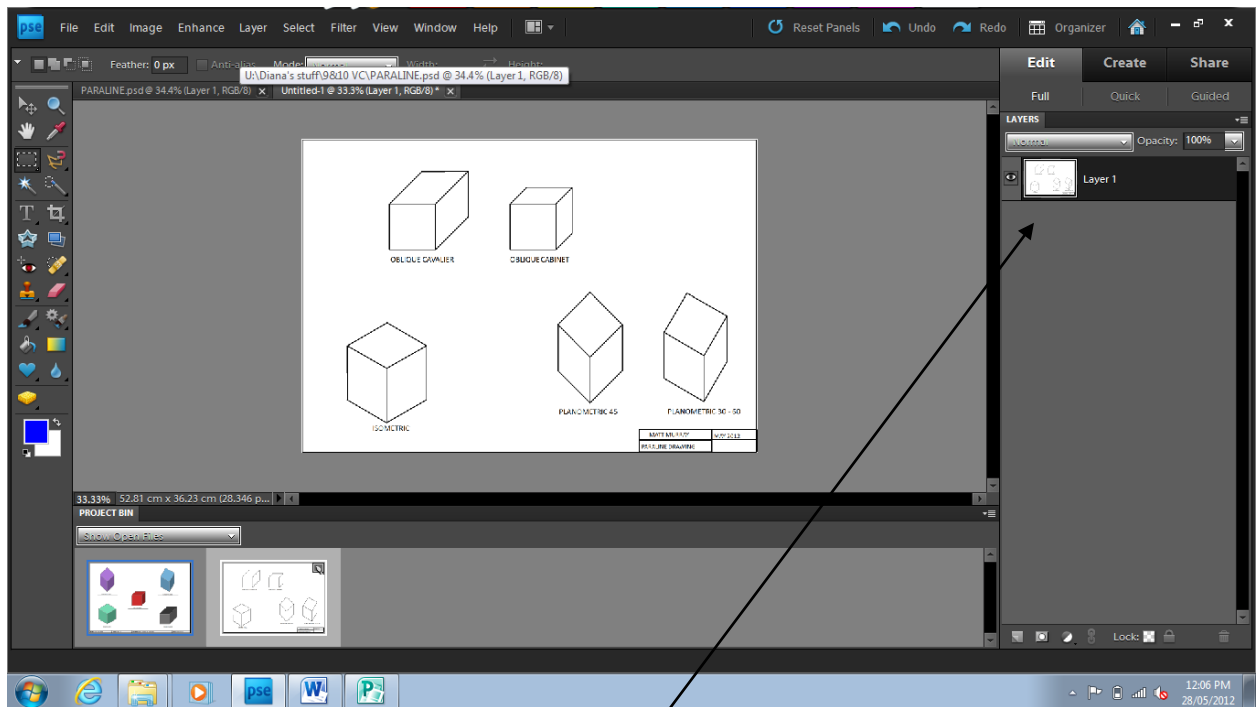

2. As Photoshop Elements will probably see your lines as too thin, choose a thicker line width while you have the whole image selected. 2 1/4 pt is fine. **Remove the squares around the text!** (Select them all using **Ctrl** and then **Shape Outline – no outline**).

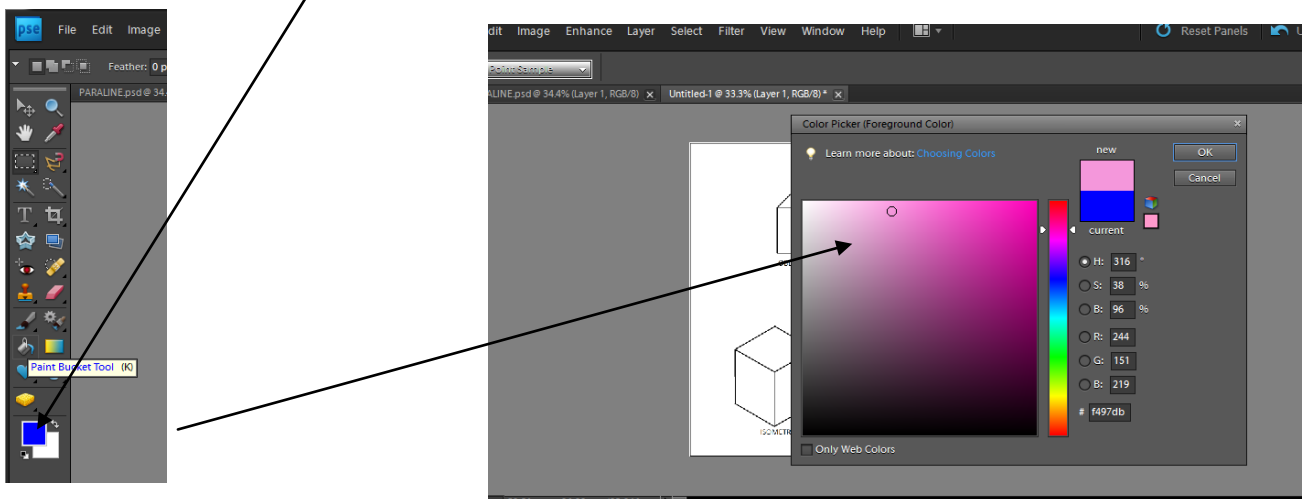

3. Now press **CTRL C** (Copy) and open Photoshop Elements.

4. Go to FILE – NEW – IMAGE FROM CLIPBOARD.

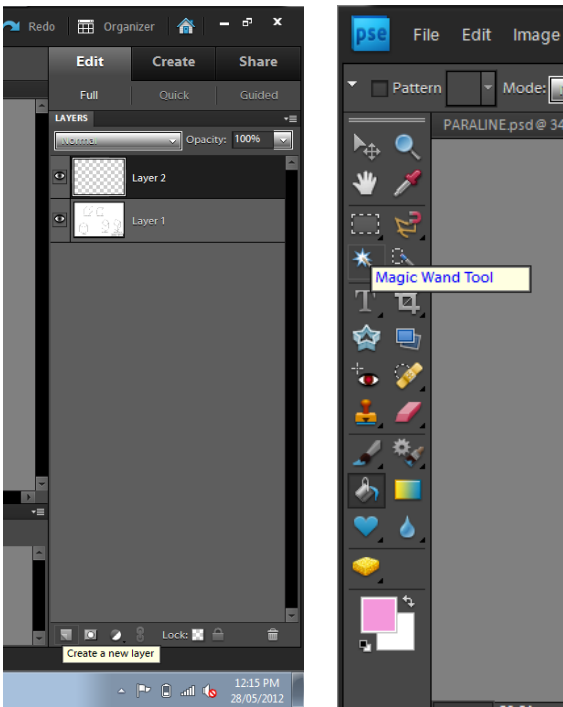

5. Make sure you can see your Layers Pallet – close the one with all the effects (apples) on it.

6. Use your bucket and gradient fill tool and colour in your various shapes. Remember to think of the light source and light, medium & dark surfaces.

**Each shape must be on a new layer – you MUST have 15 layers and the original layer when you finish. (16 layers in all)**

7. On your LAYER 1, use the MAGIC WAND and select your first area. Go to your new layer (layer 2) and fill the marching ants with your bucket tool of colour.
8. Back to LAYER 1, magic wand your next bit, create another new layer.....and then keep going. **There should be no colour on your original image!**

Finish, save (with a proper name please.)
